## ABSTRACT

Intended as a resource for administrators, teachers, nurses, paraprofessionals, health coordinators, and community action personnel who are interested in meeting the health needs of migrant children, this handbook offers suggestions for organizing community resources in providing health care to migrant children. Poor nutrition, the lack of dental care, and statistics relative to infective and parasitic diseases, diseases of the respiratory and digestive systems, tuberculosis, venereal disease, and infestation with worms are discussed in the "Overview of Migrant Health Problems." Other topics discussed under the general heading of "Migrant Health" are diagnosing the health problems of migrant children, record keeping, and follow-up work once the diagnosis has been effected. Roles, responsibilities, and home liaison coordination are analyzed under the general heading of "Health Coordination and Education." Specific films; books; national sources; migrant centers; local, county, state, and Federal agencies; and state directories of contacts and migrant health services are given as health resources.

## INTRODUCTION

This handbook is intended to serve as a resource for all who are interested in meeting the health needs of migrant children. Administrators, teachers, nurses, paraprofessionals, health coordinators, and community action personnel will find suggestions helpful to them in their efforts to organize community resources and to provide the health care so necessary to migrant children.

Migrant children move often, and because they move often the problem of diagnosis and treatment relative to health needs is compounded. Only a comprehensive and continuous effort can adequately offset the complicating factors of the migrant's life style. Such a comprehensive and continuous health program can be effected if all concerned use available resources and communication channels. Diagnosis and prescription are action oriented. However, the basis for a truly preventative health program for each child exists if available services are made known and utilized.

John Dunn, in a speech given to State Directors of Migrant Programs in Washington, D. C., December 1971, pointed out the necessity for coordinating migrant children's education and social needs with their academic education.

Your job and mine is to see to it that these children have sympathetic, understanding and competent

teachers. These are lonely children. They need warmth and love. Only an understanding staff can give it to them. It is an ingredient, according to Bernard Valdez, that repairs the self concept of a little child, a little child who may never have known a home, a little child who is meeting strange children several times a year during his school experience, a little child who often doesn't dress as well as other children in his school, a little child who knows he doesn't have the sanitary facilities to keep himself clean and to bathe as often as he should, a little child who has strange ways about him, a strange language and strange expressions, a little child who is laughed at by his peer group. The future is bright if you see to it that each school staff is ready to meet the challenge of this little child.

## PART I

### MIGRANT HEALTH

#### A. Overview of Migrant Health Problems

Poor nutrition is probably the primary cause of poor health for the migrant child. Low income, lack of knowledge, and mobility are all key factors contributing to inadequate diet and, thus, to poor nutrition. Poor nutrition can be associated with sores that do not heal properly, with low resistance to upper respiratory infections, and with lethargy-- often misdiagnosed as "laziness" or "unwillingness."

Other health problems observed in migrant children are umbilical hernias, heart murmurs, intestinal parasites, insect bites, and skin lesions. In one New York State Migrant Early Childhood Program, examination of 49 children revealed that 28 needed immediate medical attention. Such statistics emphasize the special health needs of migrant children.

Migrant children also lack dental care. Facilities are limited and often inaccessible to them; furthermore, they need such extensive work that money and time become insurmountable obstacles. In summer migrant programs, there is not time for comprehensive clinical dental care, making it an absolute must

for schools to give dental care the highest priority after other emergency medical needs are satisfied.

As reported from the National Disease and Therapeutic Index, a sampling comparing patients seen in a private physician's office and those seen in a migrant health project revealed that infective and parasitic diseases, diseases of the respiratory system, and diseases of the digestive system were from 2 to 5 times as numerous among migrants as among the general population. Among migrants, tuberculosis occurred 17 times as often, venereal disease 18 times as often, and infestation with worms 35 times as often as among patients in private physicians' offices.

As all studies indicate, there is a definite need for thorough comprehensive health care and education for the migrant.

## B. Diagnosis

The most assured way of diagnosing the health problems of migrant children is through a complete physical examination at least once each year. This examination must be thorough and not a cursory checkup. Responsibility for the yearly physical examination rests with the school nurse. She must take the initiative and coordinate as necessary to meet the

child's diagnostic needs. The nurse must contact the doctor to schedule the physical examination even if scheduled examinations are over for the year in her school district and even if the doctor is not readily available. The school nurse should have the child's health records. If she does not, then she should make every effort to obtain them. (Records and record keeping are treated in a later section.) If the nurse sees herself as the vital link to each migrant child's health program and prescription, then the child has a chance. If the nurse does not see her role as being essential to the child's future, then the child has been denied help by one of the few constants in his mobile, ever-changing life--the constancy of the school and the school nurse's office.

For early diagnostic purposes, the school nurse's most important observer is the teacher. Nurse and teacher should work closely together. Any problem that possibly relates to the child's physical condition should be relayed by the observant teacher to the school nurse for follow-up. Often the nurse may have to take the initiative by asking the teachers to be especially observant regarding the health needs of migrant children. In schools enrolling migrant children, it is advisable that a portion of any teacher in-service program be reserved for the school nurse to discuss with the teachers certain indicators of

possible health problems that should be referred to her. Such an understanding between the teacher and the nurse can help both to serve better the diagnostic needs of the child.

Enough cannot be said here about the nature of the child and his role in diagnosis. The reader must keep in mind how sensitive is the child in an alien world. The nurse's office is often bewildering and frightening to him--especially so because he sees many different nurses' offices in his lifetime, all serving the same expressed function, yet not consistently functioning with consideration for the sensitive nature of the child. For example, one incident involved a teacher of migrant children who suspected a few cases of pediculi and proceeded to inform the school nurse. The school nurse made the parasitical objects her number one campaign for the week without regard for the feelings of the hosts. She proceeded to check every child by class and "in line" so that each of the victims of her probings was in full view of others lined up behind. We are all in agreement that such procedures are unprofessional, humiliating, and crass. But these practices persist to varying degrees in many schools. And so the nature of the little host has to be considered in diagnosing.

Ultimately, the doctor is the key to proper diagnosis. After the physical examination, the nurse's work really begins in earnest. For each and every recommendation or prescription

resulting from the diagnosis, she must contact the home and refer the child to an agency or a doctor in order to meet the child's health needs. Agencies and sources for meeting such needs are listed in Part III.

### C. Record Keeping

#### 1. The Uniform Migrant Student Transfer Form

The Uniform Migrant Student Transfer Form (UMSTF) is the most significant health record yet produced for providing national continuity in attempting to meet the health needs of the migrant child. The record system is available to any school nurse in any school in the United States that serves migrant children. Through this system, when a child transfers from a school in one state to another school in some other state, his school and health record is readily available to the receiving school through one of 200 terminals tied to the central data bank in Little Rock, Arkansas. Each school receiving migrant children is assigned to a nearby terminal for all transactions to and through the central data bank. The school nurse must contact the assigned terminal and must take the initiative in processing and updating the migrant child's health record, available from the data bank. This record provides the key to the continuity so essential to any viable solution to the child's health problems.

Besides vital health information, the record provides information concerning most recent physical examinations and a history of the child's immunization and inoculation record. No longer should some little migrant boy or girl undergo the ordeal of repeated inoculations to satisfy state requirements before entering a school--repeated inoculations because no previous record exists or is available. The entire UMSTF is shown in Figure 1. The sections of the UMSTF that relate to the child's health record are shown in Figure 2, with the treatment codes relating to the appropriate columns on Sections A and B.

Complete manuals for utilizing the UMSTF are available. Persons who do not already have access to the materials or who are interested in learning more about the operation and potential of the computer system should contact the chief school administrator in their local school, or a school serving migrant children. Individual state migrant education offices, listed in Part III among the agencies serving migrant children, also have the information concerning UMSTF; and inquiries concerning the UMSTF can be made to the Migrant Programs Branch, United States Office of Education (USOE, complete addresses listed) and to Little Rock, Arkansas, Department of Education (complete addresses listed).

[illegible]

Below is an abbreviated flow chart for the plan of the UMSTF system:

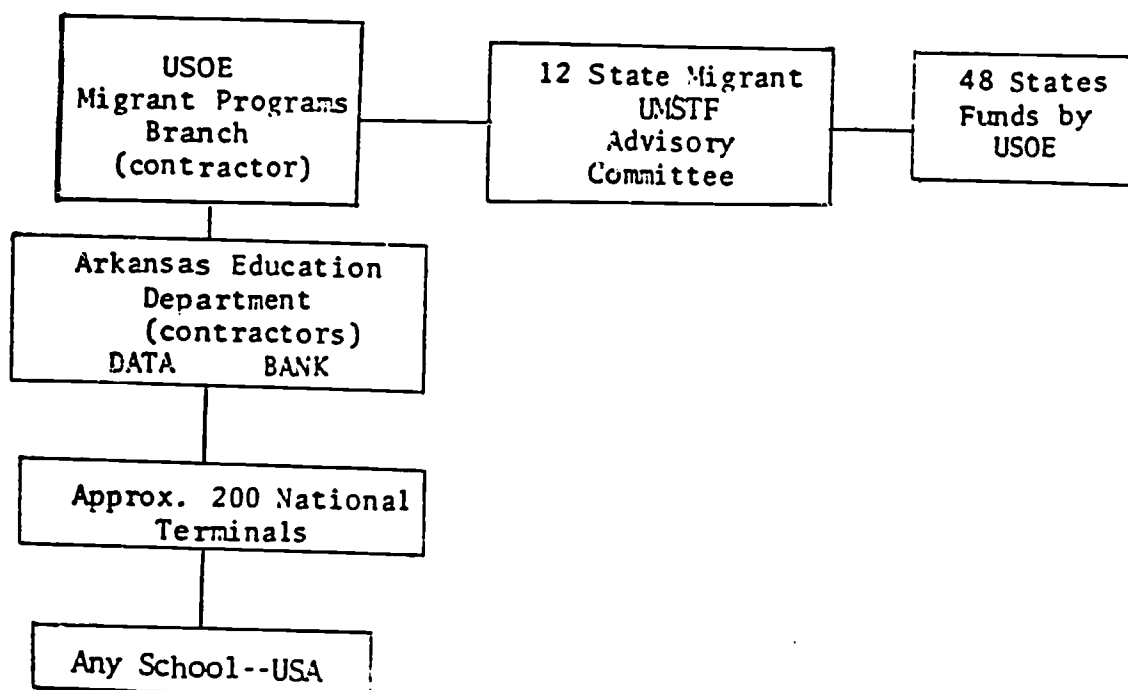

Figure 3  
Flow Chart for the UMSTF System

The pertinent facts concerning the UMSTF system and its function follow:

Funding: PL89-750

Federal Agency: USOE, Migrant Programs Branch

States Involved: 48

Purpose: Continuity of individual child's school  
and health records

Data Bank: Little Rock, Arkansas

Terminals: Approximately 200 nationally

Migrant Children Enrolled: 285,000 (350,000 expected)

Contact: State Migrant Office

Accessibility: Personal record is privileged information, available only to ID Coded School serving the child through an assigned terminal.

Statistical

Cumulations: Monthly totals for a state of enrollments and categorical transactions (nonpersonal) available to state offices. National monthly totals of enrollment categorical transactions (nonpersonal) available to USOE.

Health information should be entered on the UMSTF as soon as possible. If the information is not updated until the child leaves the school system, often the child enrolls in another school district before the last school he attended has had time to enter updating health information into the data bank. In such instances, when the new school requests a record from the data bank, the latest health updating is not included. By entering new data on the UMSTF as it occurs in the life of the child, there is always an updated report on file in the data bank--that is, if the nurse or administrator insures that the updated information is sent through the terminal to the data bank.

Each school has its own system for relaying updated information through the terminal to the data bank. If a school needs assistance regarding such routing procedures, the state Migrant Education Office should be contacted (the address is

listed under the individual states in Part III). The UMSTF is new and may not be familiar to many readers; however, the system holds great promise in the storing and delivering of interstate and intrastate health information.

## 2. Family Records

Perhaps the most important source of health information and the least-tapped source of vital information concerning the child is his parents. The child's parents or guardians or even older siblings are the most stable element in his far from constant, unstable world. As Dr. Robert Coles, psychiatrist and author of the Children of Crisis series, points out, the family puts a high priority on records pertaining to the child. They try to keep such information; and if not formally, then informally, the family knows most concerning the health history of the child.

Information is not a one-way street. It is not enough that the school or county or nurse query the parents concerning the child. The parents should be informed by the agency serving the child each time anything significant occurs affecting the health profile of the child.

Parents are interested and concerned. If they know the source of and rationale behind a prescription, the parents will cooperate in seeing that a prescription is followed. Personnel

should make home visits a top priority in attempting to serve the health needs of the child. If both parents work, the best time to visit is in the evenings, on Sundays, or, if both parents work out of doors during the harvest season, on rainy days. To neglect the home and the parent or guardian regarding health information is to deny agencies access to the most constant source of information in the child's life.

3. Local School Records

If the child has been entered in the same school previously, his records will be on file. However, it may be necessary to contact the school in which the child was last enrolled if the data bank records are not up to date.

4. County Health Offices

Any service performed by the county will be recorded in the County Health Office, and the information is available there.

5. Migrant Health Clinics

The migrant health clinic records are usually sent on with the patient if treatment is incomplete. A record is also kept at the clinic. However, if the clinic is eliminated, there is a question as to where the records go.

6. Local Hospitals and Doctors' Offices

There is a possibility that some information will be recorded at a hospital or doctor's office that has treated the child or family. Unfortunately, it is becoming quite evident in all studies being done concerning migrant health services and record keeping that lack of coordination of these services and records is the biggest drawback to a continuous comprehensive health program. It would be helpful if the adult records were incorporated into the central data bank in Arkansas along with those of the students. If this information were to be included, every agency giving any type of medical service to the family would have to be responsible for entering this information for processing in the data bank.

#### D. Follow Up

As stated earlier, once the diagnosis has been effected, the nurse's work really begins. It should be pointed out that the school has been used as the focus for health activity in this handbook because states demand that the child attend school and the Federal government has made special funding available to ensure that special effort is made to get the child into a good educational program. From these services, or through these services, available through the school, the child can be directed to further services or agencies which will meet his health needs.

This procedure is not intended to establish a hierarchy of health services or to deny any service agency the focal role in serving the child's needs. However, it should be remembered that the school is a common denominator in the child's life. The school does not always best serve the health needs of the migrant child and does not always take the initiative in attempting to meet his health needs. Each agency must determine what role it should assume in order to make its services available to the child.

A listing of possible health service agencies and relevant information, when available and where practical, is listed in Part III. However, the school nurse or person or agency assuming the focal role in meeting the child's needs is still the best source of resources and services available to the child. Personal knowledge of a particular area and diligence in pursuing all leads will reveal local services and resources of which persons outside the area will never know or hear. For example, a recent new article recounted the efforts of a local PTA to ferret out and list names of agencies that might provide services for children. After eight months the PTA completed an astonishing alphabetized list of services and service agencies. If such numerous resources existed in the area of that PTA, then certainly a number of services exist in any particular locale. The telephone directory is a good starting point for such a quest. And no one should be afraid to call and ask questions. Often, one source leads to

another. All persons involved in health programs should compile local sources, services, and resources with brief annotations concerning how each can help children.

## PART II

### HEALTH COORDINATION AND EDUCATION

#### A. Roles and Responsibilities

##### 1. The School Administrator

The success of every migrant program depends directly upon the school administrator, who must establish a close liaison with the school nurse in order to carry out full capacity health programs for the migrant child. The administrator is the person to whom information concerning available state and Federal resources relating to the health and education of migrant children is usually given, and he should avail himself of every resource. His office coordinates the processes of application for and administration of migrant programs. Implementation of migrant projects depends upon his initiative. As the community's designee responsible for the formal education of its children, it is his responsibility to become informed of all resources available to all children in the community. Once he has sought out the resource and has taken the initiative for action related to the health and health education needs of the migrant child, he can delegate responsibility for the program's operation to the school nurse or whomever. But he is responsible for bringing together the needs

of his community's migrant children with the processes and resources that can effectively meet those needs.

## 2. The Teacher

The most constant, stable person in the child's school career is his teacher. The role of the teacher is to promote stability and security between herself and the migrant child and to insure that his health and health education needs are met through coordination with school and/or community health resources and through relevant health education in and out of the classroom. And that is a tall order. Once the teacher becomes acquainted with the child, she can better observe his actions, reactions, activities, and physical and mental conditions so as to recognize a need or needs related to the child's health. Where there is no school nurse employed, it might well be the responsibility of the teacher to see that the child's health records are continued or activated. This circumstance might mean coordination with a county health nurse or with community agencies. The teacher's observations concerning possible health needs should be communicated to someone, preferably the school health office, if one is available, or to the next possible source.

Frequently overlooked or placed a dismal second to the child's profile and health record is his health education, both

in and out of school. This education certainly deserves as high a priority as does profile and record keeping, for in health education lies the success of a preventative program and a child's personal understanding and initiative in terms of his own health environment. Many states and/or schools have a prescribed or recommended health curriculum for the teacher to use as a guideline. She can supplement or augment this basic health curriculum as she sees fit in relation to the needs of the migrant child. Also, there are many good sequential health education materials available, such as the Health For All series by Scott, Foresman. Such a reference should be available to every classroom teacher. The school administrator can help the teacher learn of available Federal, state, and local resources. The school nurse (teacher) can often help in preparing programs to meet the health education needs in the classroom.

The child's health education needs have to be met outside the classroom as well as in the classroom. Materials introduced in the classroom and given to children to take home have to be explained at home. Education related to the child's health needs and related to his home environment have to be explained to his parents or guardians. Again the teacher should contact the administrator and the school nurse to learn what programs or resources might be available to help her. Some schools have programs established to serve these kinds of liaison needs.

Others do not. Where no such school-home liaison exists, the teacher has to take the responsibility for initiating such a liaison. Often the school nurse will assume a major role in meeting this need. However, when she cannot or will not the teacher must, for the child's total health program is very dependent on communication with the people who inhabit his environment, his world.

The list of agencies included in Part III will help teachers in coordinating school and home health activities. Parents should be encouraged to come to the school for special events related to the child's health education. Duplicate letters written in both English and Spanish, where appropriate, will help to explain certain materials or procedures to parents. Visits to the homes and camps to talk to the parents are very helpful. Evening programs in adult education relating to health education can be arranged, with the cooperation of school administrators. The teacher cannot ignore the child's world outside the classroom in her attempts to meet his health education needs.

### 3. The School Nurse

The role of the school nurse is potentially the most direct and effective in helping to solve the health problems of the migrant child. All that applies to the teacher applies likewise to the school nurse. Further, she should take the initiative in many

of the responsibilities and contacts outside the school. The teacher's schedule necessarily ties her too often and regretfully to the classroom. Often the nurse is less restricted and can make calls outside the school. It is essential for her and the classroom teacher to work closely together for the welfare of the child.

The school nurse is the mediator for all progress. It is through her that agencies for special help can be reached. It is through her that the adult migrants can be reached and offered health education programs. Through her intercession, diagnosis can be made by the school physician and treatment or follow-up carried out. The coordination and updating of essential health records are the responsibility of the school nurse (see "Record Keeping"), and these records must be kept up to date at all times so that information will be available to another school system receiving the migrant child. It is the role of the school nurse to work with the agencies concerned for the total health welfare of the migrant child.

#### 4. The Paraprofessional

The classroom aides can play a very important part in helping observe the migrant child, in consulting with the classroom teacher, and in bringing problems or questions to the attention of the school nurse for consultation and action.

in-service program for paraprofessionals should include a section on health and health education. Since the general aide must take her cue from the classroom teacher, whatever applies to the teacher applies to the aide. Some schools hire special health aides, and their roles are often clearly defined by the school. It will help the aide to read the descriptions of the roles for various school personnel and to adopt and adapt where she sees fit in consultation with the teacher or the nurse. Paraprofessionals can be invaluable to the home-school effort, especially if the aides are hired from the local migrant population. For example, the use of paraprofessional and home liaison personnel who are migrant and bilingual (Spanish and English) for migrant health projects in schools serving mostly Mexican Americans can be an invaluable method of achieving rapport with the community to be served.

##### 5. Other Agencies

If the school cannot or does not take the initiative for coordinating the child's health needs and education, then another agency must do so. Besides its particular responsibility, defined or prescribed by its service or purpose, the agency must, in this case, assume the role of coordinator for all health services, home liaison, and record keeping. However, it is advisable for the agency to first check with the school personnel to

see if these activities can be conducted through the school. Once an agency assumes health coordination responsibility for local migrant children, then it will be helpful for the personnel from that agency to read this handbook to reinforce and supplement what they see as their function.

#### B. Home Liaison Coordination

The importance of working closely with the migrant child's family has been mentioned in previous sections of this work ("Record Keeping," roles of teacher and nurse). The parent is a vital key both to understanding the child and his health needs and to introducing prescriptive and preventative health practices into his total environment. No record is complete until parents or guardians have been interviewed. And no child can become involved in a total health program until the school or project coordinates and cooperates with the child's home to effect such a totality.

Parents are often difficult to locate and to isolate for liaison purposes. As was said earlier, the best times to contact parents are often in the early evening, on Sundays, or, in cases where parents work outside, on rainy days. Paraprofessionals who work in health or education programs and, preferably, who come from the migrant population can be excellent personnel

for home-school contact. Visits to growers and processors (and their wives) frequently can result in earlier access to camps and migrant housing facilities. Older siblings are often most responsive to the needs of younger brothers and sisters, and upon request will help the teacher, nurse, administrator, or paraprofessional to effect home-school (or project) liaison. Also, it helps to send materials and explanatory letters home with the child, as was discussed earlier; for home liaison is a two-way street. Attempts should also be made to bring the parent into the school or project for liaison purposes.

Transportation often can be a problem in effecting home liaison. Some of the funding agencies listed in the following pages can be contacted for possible funding of transportation costs. Voluntary agencies or funding agencies do supply either transportation or the costs. Some projects reimburse the migrant for mileage if he uses his own car (one driver can bring in five others). Also, school buses can be used to transport parents to the school or project for special programs, and health projects and clinics often provide transportation as a part of their operation. In projects utilizing the services of a nurse or home coordinator, transportation expenses are a must item.

Home-school liaison has to depend on a certain somebody who is familiar with the child and who understands what resources

and facilities are available to help the child. Such a person might be hired by the school, if the school has a program funded through special education or health funds. The person may be someone who works for a voluntary agency, the county, the state, or some agency other than the school or central record-keeping agency. In such cases, the home-liaison person must establish immediate contact with the school or dominant service agency; and if no such collecting agency exists, and the coordinator understands the child and the services available, then he or she can effectively work to involve the parents or guardians.

Involvement means helping the parents or guardians to understand. They must be informed concerning the purpose of the home-liaison coordinator. Their child is the coordinator's focal point of interest. The child's welfare is the concern of both the coordinator and the parent or guardian. The parent should be informed and involved in programs concerning the welfare of the child. And parents should be informed as to how he can avail himself of clinical and health education services in the area. By becoming involved through his own needs, he is motivated to follow up on his child's needs. Health practices taught and initiated in the school or project have to be taught and initiated in the camp or home in order to educate the adult both to his needs and the needs of his child.

## PART III

### HEALTH RESOURCES

#### A. Suggested Materials and Sources

##### 1. Films

- \*a. "Safe Food": sound, 16mm., 9 minutes. Shows family using good practices in cooking, serving, and storing food under camp conditions.
  - M-935 Spanish American cast, Spanish language (color or black and white)
  - M-826 Spanish American cast, English language (color or black and white)
  - M-729 Negro cast, English language only (black and white only)
- \*b. "A Healthier Place to Live": sound, 16mm., 11 minutes. Focuses on everyday health hazards which seasonal farm families often find when living in camps, and on practical ways to combat them. Indicates necessity for providing and maintaining healthful camp surroundings.
  - M-934 Spanish American cast, Spanish language (color or black and white)
  - M-825 Spanish American cast, English language (color or black and white)
  - M-728 Negro cast, English language only (black and white only)
- \*c. "Keep Clean--Stay Well": sound, 16mm., 9 minutes. Emphasizes fundamentals and importance of personal hygiene. Points out relationship between keeping clean and keeping well.
  - M-933 Spanish American cast, Spanish language (color or black and white)
  - M-824 Spanish American cast, English language (color or black and white)
  - M-674 Southern Negro cast, English language only (black and white only)
- d. "The Forgotten Families": color, 16mm., 28 minutes. Shows how different communities meet the health needs of the migrant workers who serve them. Free loan basis. Order from H.E.W. Regional Offices (for address, see pp. 39-40). Requests for materials should be

\*Produced for the Migrant Health Activity of Public Health Service by the P.H.S. Audio-Visual Facility, the films are on free loan from:

Public Health Service  
Audio-Visual Facility  
Atlanta, Georgia 30333

- d. directed to Information Coordinator, Community Health Service, Public Health Service.

The above films serve as an aid to physicians, nurses, health educators, and others teaching migrant families. The purpose of the films is to promote discussion and action. A discussion guide accompanies each film.

- e. "To Be Somebody": color with sound, 16mm., 33 minutes. Inservice film on loan from the New York State Migrant Bureau (for address, see state directory).

1537 35th Street, N.W.  
Washington, D.C. 20007

Pamphlets, lists, movies--for the deaf and hard of hearing.

American Association for Health,  
Physical Education, and Recreation  
1201 16th Street, N.W.  
Washington, D.C. 20036

Pamphlets, lists, and movies.

American Cancer Society  
Director of Public Education  
219 East 42nd Street  
New York, New York 10017

Films, pamphlets, posters, exhibits, TV materials, radio scripts, and transcriptions.

American Dental Association  
Bureau of Dental Health Education  
222 East Superior Street  
Chicago, Illinois 60611

Pamphlets, charts, posters, models.

American Diabetes Association  
1 East 45th Street  
New York, New York 10017

A.D.A. Forecast (bimonthly magazine), reprints, pamphlets.

American Foundation for Allergic  
Diseases  
525 Lexington Avenue  
New York, New York 10017

Pamphlets.

American Hearing Society  
919 18th Street, N.W.  
Washington, D.C. 20006

Pamphlets, posters, reprints of articles from Hearing News.

American Heart Association  
Inquiries Section  
44 East 23 Street  
New York, New York 10010

Films, slide films, pamphlets, posters, exhibits, list of publications.

3. National Sources of Materials (cont.)

American Hospital Association  
Director of Public Relations  
840 North Lake Shore Drive  
Chicago, Illinois 60611

Pamphlets, kits of sample  
hospital publications, films,  
radio transcriptions, National  
Hospital Week materials.

American Institute of Baking  
Consumer Service Department  
400 East Ontario Street  
Chicago, Illinois 60611

Pamphlets, posters (classroom  
quantities free).

American Medical Association  
Bureau of Health Education  
535 North Dearborn Street  
Chicago, Illinois 60610

Films, pamphlets, posters,  
exhibits, radio transcriptions,  
TV scripts, packets, lists, and  
the magazine Today's Health.

American National Red Cross  
Office of Public Information  
17th and D Streets, N.W.  
Washington, D.C. 20006

Films, pamphlets, posters,  
exhibits, radio scripts,  
transcriptions, catalogs, lists.

American Social Health Association  
Division of Public Information  
1740 Broadway  
New York, New York 10019

Pamphlets, exhibits, lists.

Arthritis and Rheumatism Foundation  
10 Columbus Circle  
New York, New York 10019

Pamphlets, posters, radio  
scripts, transcriptions, films.

Association for the Aid of Crippled  
Children  
Division of Publications and Public  
Education  
345 East 46th Street  
New York, New York 10017

Pamphlets, reprints, exhibits,  
lists, movies, books.

Better Vision Institute, Inc.  
230 Park Avenue  
New York, New York 10017

Pamphlets, slide-sound films,  
movies.

Borden Company  
Consumer Services  
350 Madison Avenue  
New York, New York 10017

Pamphlets.

3. National Sources of Materials (cont.)

Cereal Institute, Inc.  
Educational Director  
135 South LaSalle Street  
Chicago, Illinois 60603

Elementary and high school  
classroom teaching units.

Child Study Association of America  
9 East 89th Street  
New York, New York 10028

Pamphlets, publication and book  
lists. Leaflet on organizing  
a parent education program.

Cleveland Health Museum  
89 Euclid Avenue  
Cleveland, Ohio 44106

Maintains workshops for creating  
exhibits to be loaned; Dickinson-  
Belskie life-size models on human  
reproduction, illustrations, and  
photo-service.

Evaporated Milk Association  
Nutrition Service and Home Economics  
Department  
228 LaSalle Street  
Chicago, Illinois 60601

Pamphlets, charts, posters.

General Mills  
Education Section  
Department of Public Services  
400 Second Avenue, South  
Minneapolis, Minnesota 55401

Nutrition-education teaching  
aids.

Johnson & Johnson Baby Products  
Educational Division  
501 George Street  
New Brunswick, New Jersey 08903

Pamphlets, charts, films.

Mental Health Materials Center  
419 Park Avenue South  
New York, New York 10016

Family life, mental health,  
human relations; pamphlets,  
films, plays.

Muscular Dystrophy Associations  
of America, Inc.  
Public Information Department  
1790 Broadway  
New York, New York 10019

Pamphlets, reprints, films,  
radio scripts, exhibits, TV  
clips.

National Association for Mental  
Health  
Director of Education and Program  
Services  
10 Columbus Circle  
New York, New York 10019

Pamphlets, posters, radio scripts,  
transcriptions, catalogs, exhibits,  
films, dramatic sketches.

3. National Sources of Materials (cont.)

National Association for Retarded Children  
386 Park Avenue, South  
New York, New York 10016

List of Publications.

National Congress of Parents & Teachers  
700 North Rush Street  
Chicago, Illinois 60611

Articles in National Parent-Teacher, the PTA Magazine.

National Council on Alcoholism  
New York Academy of Medicine Building  
2 East 103rd Street  
New York, New York 10029

Pamphlets, reprints, books,  
films, posters, exhibits,  
radio scripts.

National Dairy Council  
Program Service Department  
11 North Canal Street  
Chicago, Illinois 60606

Health education materials,  
catalog listings, booklets,  
posters, films, filmstrips,  
exhibits, displays.

National Epilepsy League  
203 North Wabash Avenue  
Chicago, Illinois 60601

Quarterly newspaper, Horizon;  
Phamplets.

National Foot Health Council  
270 Union Street  
Rockland, Massachusetts 02370

Pamphlets, posters, radio scripts,  
cartoons, children's foot size  
charts.

National Health Council  
1790 Broadway  
New York, New York 10019

Pamphlets, reprints, leaflets,  
list of publications, health  
career materials.

National Hemophilia Foundation  
175 Fifth Avenue  
New York, New York 10010

Pamphlets.

National League for Nursing, Inc.  
Director of Public Relations  
10 Columbus Circle  
New York, New York 10019

Leaflets, pamphlets, reprints,  
bibliographics, books, handbooks,  
posters, films, slides.

National Multiple Sclerosis Society  
Public Relations  
257 Park Avenue, South  
New York, New York 10010

Pamphlets, radio scripts, radio  
and TV spot announcements,  
medical manuals.

3. National Sources of Materials (cont.)

National Public Relations Council of  
Health and Welfare Services  
257 Park Avenue, South  
New York, New York 10010

Director, N.Y.S. Migrant Center  
State University College  
Geneseo, New York 14454  
Telephone: 716 245-5481

4. Migrant Centers (cont.)

Nicholas Silvaroli

Director, Reading Center  
College of Education  
Arizona State University  
Tempe, Arizona 85281  
Telephone: 602 965-3474

B. Agencies

1. Local

a. Schools, hospitals, and doctors.

b. Clinics

Well Baby Clinics (usually sponsored by County Health  
Departments but located in different communities)

c. Community Action Agencies (sources of information, often  
active in securing state and Federal grants to meet health  
needs)

Community Crisis Organizations (excellent sources of infor-  
mation regarding service agencies; some act as service agencies,  
especially pertaining to drug information)

d. Organizations

1. Kiwanis Clubs (often helpful in obtaining expensive equip-  
ment necessary for particular treatments)

2. Lions Clubs (nationally known for eye conservation and aid  
to children in need of remedial eye treatment)

3. United Fund

4. Red Cross

5. Moose, Elks, Shriner, and other clubs

6. Church and Religious Organizations

1. Local (cont.)

7. Local Voluntary Organizations--migrant service agencies (such as Offices of the Migrant Ministry, sponsored by the Council of Churches), emergency assistance agencies in local areas, and local migrant concern committees function to promote community and legislative interest in the welfare of the migrant and to provide information sources.

2. County

Many funds, although Federally appropriated, are distributed and controlled by the county health boards; these boards are the biggest resource for persons working with migrants, in securing both project funds and information.

- a. Welfare Departments
- b. TB Facilities
- c. County Clinics (out-patient and welfare clinics)
- d. Council of Churches

Strong and numerous county health facilities lead to better health for the county. However, if these facilities are lacking and if county officials are not cooperative, other avenues must be explored. Often in these cases it is more useful to appeal directly to the state contact. In one instance where all else failed to produce toothbrushes for a migrant summer program, a call to the county health commissioner brought instant action.

3. State

- a. Department of Health (listed where available)
- b. Department of Social Services (contact at state capital)

It is from this department that information for Medicaid can be obtained. Medicaid is a Title XIX project of the Public Assistance Act. For complete information, write for Characteristics of States' Assistance Programs Under Title XIX of the Public Assistance Act (Public Assistance Series 49, 1970 Edition).

3. Local (cont.)

Address:

U.S. Department of Health, Education  
and Welfare  
Social and Rehabilitation Service  
Assistance Payments and Medical  
Services Administration  
Washington, D.C. 20203

- c. Department of Education (migrant directors listed in directory of states) programs funded by Federal funds, Title I, Elementary and Secondary Education Act.
- d. Interdepartmental Committee on Migrant Labor (available in some states)

4. Federal

- a. United States Office of Education (address in state directory under Washington, D.C.)

- b. Migrant Grants

Department of Health, Education, and Welfare

Migrant Health Projects (listed by state in state directory; funded under Section 310, Public Service Act)

Federal Office:

U.S. Department of Health, Education, and Welfare  
Health Services and Mental Administration  
Community Health Service  
Division of Health Care Service

4. Federal (cont.)

- c. Migrant Grants (O.E.O; address listed in state directory where available)

Certain states receive Title IIIB funds from the Federal government to serve the needs of migrants.

- d. National School Lunch Program  
Special School Lunch Program: Through the United States Department of Agriculture, reimbursements are allowable to school districts for food programs serving migrant children. The National School Lunch Program is the basic reimbursement program for children enrolled in regular school programs, and the Special School Lunch Program is available for migrant children enrolled in non-regular school programs such as summer programs. For further detail contact one of the following:

1. U.S. Department of Agriculture  
Consumer and Marketing Service  
14th Street and Independence Avenue, S.W.  
Washington, D.C. 20250  
Telephone: 202 388-6766
2. Migrant Education Office (address in state directory)
3. National or Special School Lunch State Office

- e. Office of Child Development (Child Care Center information)

Mr. Hank Aguirre  
Office of Child Development  
Indian and Migrant Section  
Donahue Building  
4th and Independence, S.W.  
Washington, D.C.

Mr. Dominic Mastrapasqua  
Director  
Indian and Migrant Programs  
Division  
Office of Child Development  
P.O. Box 1182  
Washington, D.C.

C. State Directory

1. Classification of Organization and Scope of Services in Migrant Health Projects\*

\* This classification is from the Department of Health, Education, and Welfare

C. State Directory (cont.)

In order to facilitate the description of services provided by the projects, the following classifications were designed. It must be noted, however, that these classifications are not all inclusive.

Full-Time Comprehensive Health Services:

A comprehensive range of diagnostic, therapeutic, and follow-up medical services offered by the project on a daily and year-round basis by full-time medical staff in a center setting. Provisions for dental care, health counseling, and outreach services, as well as adequate provisions for preventive services are offered either inside or outside the center.

Scheduled Comprehensive Health Services:

A scope of medical services similar to those listed above are offered by project, but through intermittently scheduled clinics (for example, one or two times a week at two or three hours per session). In general, these clinic sessions are backed by referrals of patients by nurses and outreach workers to local physicians on a fee-for-services basis at times when clinics are not in session. Provisions are also made for caring for other health needs such as dental care, health counseling, and outreach services in addition to preventive services. Environmental health activities are an element of the project.

Scheduled Medical Services:

Although the project offers complete diagnostic, therapeutic, and follow-up medical services through intermittently scheduled clinics with referral to private physicians during nonclinic hours, provisions are not necessarily made to offer dental care services and other health services mentioned above. Environmental health activities may be an element of the project.

Scheduled Categorical Health Services:

The project focuses upon clinics for specific diseases or categorical emphasis (for example, Tuberculosis Control, Venereal Disease Control, Maternal and Child Health, Immunization) and does not offer a broad range of medical services in a clinic setting. General health care is provided through referral by nurses and outreach workers to private physicians and dentists on a fee-for-service basis. Camp sanitation inspections and efforts to correct deficiencies may be a component of the project.

Non-Scheduled Health Services:

All general health care is provided by the project through a fee-for-service

C. State Directory: (cont.)

referral system to private physicians and, in some instances, to private dentists. Nursing services provided are primarily outreach and follow-up. Camp sanitation inspections and efforts to correct deficiencies may be a component of the project.

Limited Categorical Services:

The project has a specific objective, usually limited to environmental health services only, and is not directed to the provision of direct general health care. Environmental health activities usually involve camp inspections, enforcement of state codes, and coordinating efforts with other local sanitation programs.

Administrative-Consultative Services:

The project does little in the way of providing direct health care and devotes its efforts to consulting and coordinating the direct health care activities of other groups.

The Department of Health and Rehabilitative Services of the State of Florida has published a very inclusive directory which all schools in Florida with a migrant population should have readily available. Included in the directory are locations of:

1. Resources for migrant families
2. District offices of vocational rehabilitation
3. Florida crippled children's bureaus
4. Alcoholic rehabilitation program services
5. Mental health centers in Florida
6. Mental health and child guidance clinics in Florida
7. County Health and sanitation offices
8. Division of mental retardation

Telephone: 612 339-7751  
(This is a part of the Public Health Migrant Health Services.)

In Minnesota, 31 counties have a migrant population. Of these, 18 receive migrant health services such as nursing, family medical centers, dental health, nutrition, and health education. In the less heavily populated counties, migrants are encouraged to utilize the existing permanent health services that are available.

Nebraska Migrant Health Project:

The Nebraska Migrant Health Project serves many families. The Project staff consists of a Coordinator, Medical Advisor, Preceptee, Health Nurse, Secretary, and five community health aides. Helping the Project are a Neighborhood Youth Corps Interpreter, student nurses (Registered Nursing students and Licensed Practical Nursing students), and two county public health nurses. The Project staff registered 446 families for a total of 2,563 people in the summer of 1971. A dental program was implemented during the 1972 season.

State Health Director: Dr. Henry D. Smith  
Director: Franklin D. Harris, M.A.  
Coordinator: Carl D. Ogg, B.F.A.  
Medical Advisor and Preceptor: Dr. Walter Harvey, Jr.  
Preceptee: A senior medical student from the University of Nebraska  
Health Nurse: At present, a part-time nurse is hired for each season; however, the project hopes soon to have a full-time public health nurse.

Address:

P.O. Box 94757  
1003 O Street  
Lincoln, Nebraska 68508  
Telephone: 402 471-2101

### Nebraska (cont.)

#### Counties served:

- |   |                           |
|---|---------------------------|
| 1. Scottsbluff (Gering and Scottsbluff) | 7. Chase (Imperial)       |
| 2. Sioux                                | 8. Lincoln (North Platte) |
| 3. Box Butte (Alliance)                 | 9. Goshen, Wyoming        |
| 4. Morrill                              | 10. Perkins               |
| 5. Deuel                                | 11. Dawson                |
| 6. Keith (Ogallala)                     | 12. Red Willow            |

The cities mentioned in parentheses are the locations of the Migrant Health Offices, Family Health Clinics, and Family Planning Clinics. Also, Migrant Day Care Schools are located in Scottsbluff, Alliance, Bayard, and Imperial.

The Nebraska Migrant Health Project uses an interview and questionnaire form to register migrant families for Project services. In order for a migrant family to receive Project assistance, a personal interview is taken by a Project staff member either in the Project office, in the migrant's home, field, or wherever he can be reached (see Fig. 4).

Local directors of Social Service:

Food assistance, casework, and counseling are available to migrants in all counties. At the discretion of local county officials, general assistance and homemaker services are also available. Financial assistance, medical services, and child welfare services are available to migrants.

Division of Economic Opportunity:

Other food and financial assistance may be available to the migrant through the Department of Local Affairs, Division of Human Resources, funded by the U.S. Office of Economic Opportunity. Migrants may qualify for a small cash allowance if they are on the way back to their home states from North Carolina without funds. A referral service is also provided.

### Migrant Program:

Eight school districts participate in the Migrant Education Program of North Dakota. The health program, coordinated by Mrs. Joan Schraufek with a staff of nine registered nurses, several licensed practical nurses, infant care supervisors, and aides, offers complete physicals; dental care, including examination and instruction; Mantoux testing with referrals and follow ups; and specialist referrals. Health instruction, in-service training, keeping of records and home visitations have also been implemented. For more specific information contact Mr. M. J. Peterson at the above address.

### South Dakota

There are no migrant health projects at the present time in the State of South Dakota, but a tri-state health program covering 3,600 square miles in parts of South Dakota, Montana, and Wyoming has been initiated. The evaluation indicated that more health services were needed.

Telephone: 509 865-2719

There are regional migrant health centers under the State Health Department in Whatcom, Skagit, and Okanogan Counties. These projects are on rather temporary funding at the present time. A project in Chelan and Douglas Counties was begun by a migrant assistance committee in Wenatchee and has grown stronger through the years. It is providing a fine service

### Washington (cont.)

to migrant families. In the Yakima Valley, the most extensive health services are being provided through the Farm Workers Family Health Center, funded through the Office of Economic Opportunity. This center is also coordinating some activities with the migrant children's education programs in the vicinity and expects to expand its services through satellite centers within the state. Eventually health services will be provided in two critical areas--North Central, serving Okanogan, Chelan, Douglas, and Grant Counties and South Central, serving Adams, Benton, Franklin, and Yakima Counties.

Health services are provided in 43 projects incorporated in the education programs in 180 schools. They include nurses' services; screening for physical, sight, and hearing deficiencies; emergency doctors' services; and accident insurance.
